

GAS SAVER (GAS SAVING EQUIPMENT)

A newly developed locker arm is applied with this Model D-4 Gas Saver, so that no pre-adjustment is required.

- By hanging the torch on the lever, gas valves are automatically closed by the torch weight and the flame is gradually extinguished.
- For re-ignition, take the torch off the lever and put the torch head near the pilot flame, the torch will be ignited. The operator can re-start brazing work at once since no adjustment is required.
- The pilot flame is firing all the time, but gas consumption is low.
- A Gas Saver can be mounted directly on the work table.
- Spare parts are available.

OTHER DAISHIN PRODUCTS

- Vapour Flux
Evaporative flux for all gas brazing.
- Vapour Tank
Generator for Vapour Flux
- Gas Dryer
Prevent clogs of Vapour Tank by reducing the water contained in the fuel gas.
- Automatic brazing machines
Automatic brazing machines are available for your products.
- Daishin Bronze
Two types are supplied.
One containing nickel for wide range brazing and second containing tin for better fluidity.

NEW MODEL GAS SAVER D-4 GAS SAVING EQUIPMENT

Before the welding or brazing work commences, the flame of the torch should be adjusted by controlling both fuel gas flow rate and oxygen flow rate. After the operator takes a short break, the same adjustment of the torch should be required. The torch firing condition should be adjusted depending on the configuration and material being joined, and these adjustments tend to be performed as a habit. If not, considerable quantities of fuel gas and oxygen are consumed. Daishin Gas Saver resolves this problem at once, saves gas, reduces expenses and is safer.

GAS SAVER MODEL D-4

ADVANTAGES

- Prevents the waste of gases.
- Easy ignition with the pilot burner.
- Torch adjustment is not required when re-igniting.
- Smooth flame out by hanging the torch on the lever.
- Applicable for all torches.
- Designed for both acetylene and LPG gases.
- Constant burning condition is obtained.
