

BEAM SMOKE DETECTORS

SPC-ET

SRA-ET

Both models utilise a near infra-red beam to detect the presence of smoke which is pulsed to reduce the overall current consumption and improve the noise rejection characteristics.

Model **SPC-ET** is a two wire beam smoke detector that consists of an emitter and receiver that cover a distance of 5 - 100m providing a maximum coverage of 1500m². When used on a conventional system the emitter and receiver can be powered directly from the zone or if required the emitter also has an option to be powered from a separate 24Vd.c. supply.

The **SPC-ET** can also be interfaced to Hochiki's ESP system, the receiver can be connected to a **CHQ-SZM** Single Zone Module or a **CHQ-DZM** Dual Zone Module, and the emitter can then be powered directly from the loop or via a separate 24Vd.c. supply.

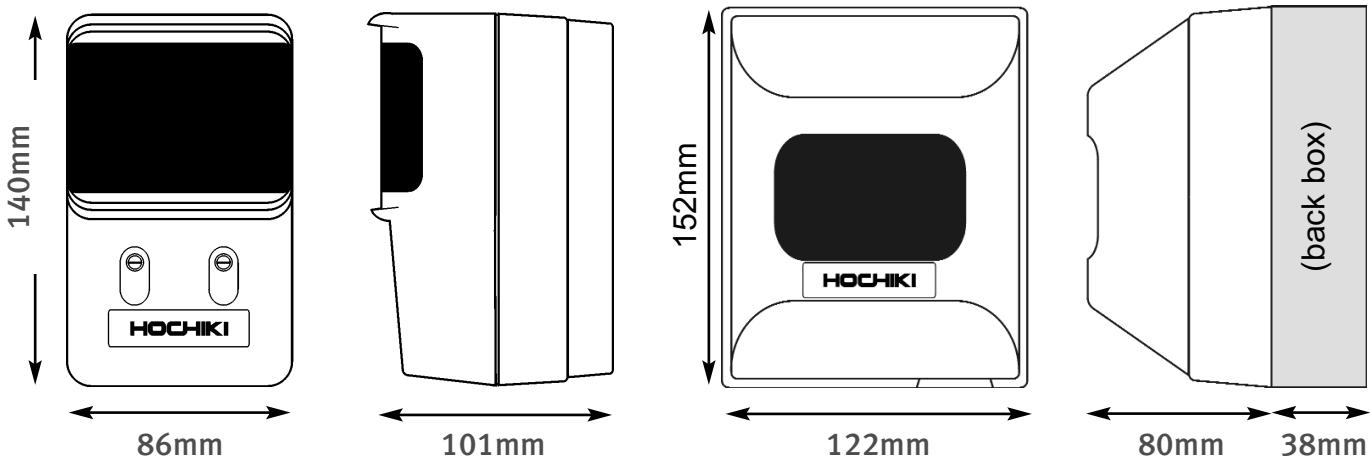

- ▶ 5 - 100m range
- ▶ Powered directly from the zone
- ▶ Full line continuity options
- ▶ Latching or Non-Latching fault option
- ▶ Automatic contamination compensation
- ▶ Automatic signal strength adjustment
- ▶ Approved by LPCB

Model **SRA-ET** is a reflective beam detector comprising of an emitter/receiver unit and reflector plate that works over a distance of 5 - 30m, providing a maximum coverage of 450m².

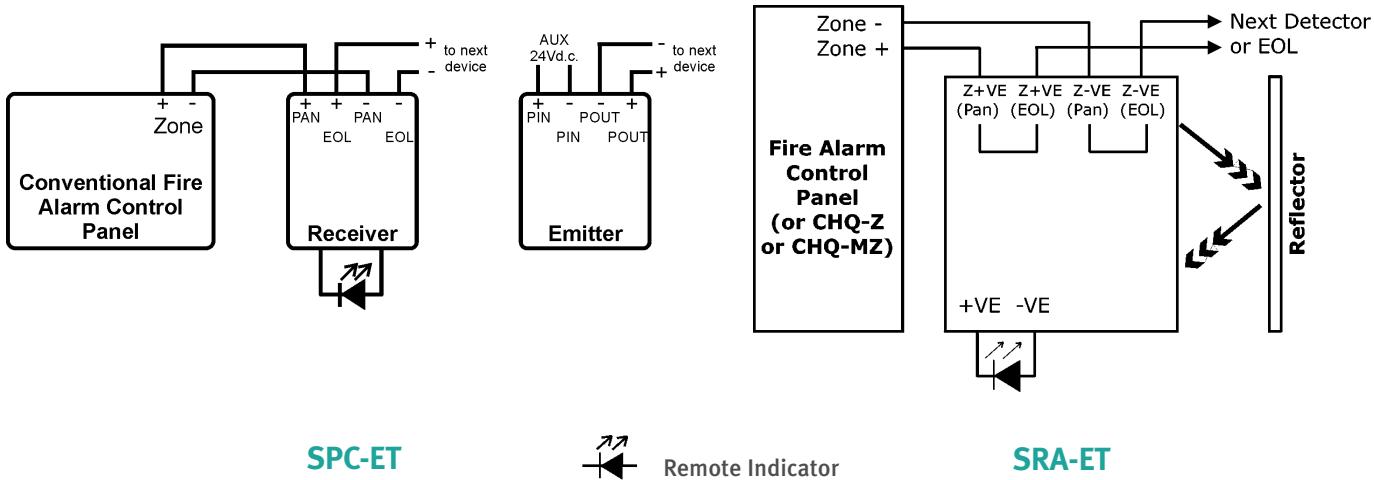

- ▶ 5 - 30m range
- ▶ Small flat reflector
- ▶ Powered directly from the zone
- ▶ Full line continuity options
- ▶ Automatic compensation
- ▶ Approved by LPCB & VdS
