

Easy retrofit installation Under the sink

Simply put the UV4ALL under your sink and connect the hoses from Water Input to the tap (and heater if installed) – no expensive installation service by others required!

Service made simple – low operational cost!

Operation and replacement of the consumables and spares can easily be carried out by the end user!

- 3 Replace Particle Filter every 3 months
- 6 Replace the A/C block cartridge every 6 months
- 12 Install a new UV lamp only every 12 months

Filtration is not enough!

Despite numerous water purifier's promises, it is STILL NOT ENOUGH to ensure clean water by filtering out the sediment particles and residue chlorine. There are STILL various types of bacteria, viruses and spores existing in the water and these CANNOT be eliminated through filtration and chlorination.

For example, Giardia and Cryptosporidium cannot even be killed by Chlorine.

The best approach to ensure that all those bacteria are eliminated is using UV lamp to sterilize the water as closest as possible to the point of use.

UV4ALL inherits the technology that has been used in the marine and offshore industry where strict standards are required. Thanks to the powerful 20W UV lamp, not only the water is well sterilized but also the flow rate is generous enough to meet the demand of usage for family, coffee shop, small restaurant, hospital and so on.

Multi Barrier Water Purifier UV4ALL

Germany Headquartered Company UEBERALL, having more than 50 years of experience in Water Treatment, launches new consumer / commercial water treatment unit "UV4ALL" to the ASIA market!

Different to all "plastic-fantastic" water purifiers in the market, which even partially promise incomprehensible "magic" cleaning effects, UV4ALL provides three effective German-Engineered water treatment steps: Particle Removal, Chlorine / Chloramine Removal and proper Bacteria Kill!

The industrial equipment quality and design is competitively priced and has a life time expectation of 10 years under 3 years maker's warranty (except wear parts) and is very easy to be installed and maintained by the end user.

The UV4ALL technology is available as well for installation „under the sink“ as for „interface installation“ for the whole home.

INNOVATION by
UEBERALL

Avoid ALL bacteria in your water - even those, which cannot be killed by Chlorine!

No more eye and skin irritation by Chlorine and Chloramine in your water at home - as well as no more bad taste and odor of your water!

„Blu Matrix“
Controller
ensures easy
control of
the UV purifier.

50+ years
industrial
experience -
available for
ALL your water

Unique UV
sensor
technology for
constant UV
monitoring

Protect yourself and your family!
Enjoy ALL your water without limitations for

- Food and Beverage preparation
- Body and Face Wash and showering
- Expectant Mother, Baby and Children food
- Tasty and healthy Tea and Coffee

The engineered in Germany UV4ALL system represents an effective Multi Barrier System for ALL your water:

1. Particle removal and bacteria kill
2. Removal of Chlorine and Chloramine by highly compressed Activated Carbon Block
3. Powerful kill of bacteria and reduction of small Chlorine residuals by UV!
